**Transparent gas discharge indicator**

Sophisticated design, innovative and visually effective

This is a new approach to discharge indicator designed to suit modern aesthetic sensibilities. When it is OFF, it blends easily with its surroundings so that it is barely noticeable. When it is ON, it provides a striking visual message to warn of dangers.

It can be switched between Japanese, English, and/or other languages.
It is inconspicuous when not in use. It is noticeable when needed.

Stylish yet subtle and unobtrusive design
It is designed to not be noticed until needed. The fully transparent display panel blends seamlessly with the surrounding environment.

More visual impact when used
Its visual impact is substantially greater than that of standard discharge indicator and has been further improved by having the sides and lower edge of the display panel light up and flash while the sign is ON, as a means of attracting attention.

Enhanced display for people with color-blindness
Color-blindness tends to affect the ability to discern red colored text on a black or brown background. This transparent indicator features a white background with flashing strobe effect for maximum visual prominence.

Multi-lingual support
(Displayable up to four languages*)
The indications can be switched between Japanese, English and/or other languages. A combination of proprietary transparent display panels allows multi-lingual indications for the benefit of non-Japanese.
